SubTopic: *Allocation Flags*

I_ANNVAL 1 | 802 (0:9)

Allocation flag for ANN_VAL

Values: Levels 1-3 indicate imputations use of income range responses and 4-8 indicate imputations without range responses. Within each group, lower numbers indicate more match variables (and better matches). Non-respondents to value questions can provide values in one of five range bins. For example, non-respondents can provide earnings from the longest job in these categories: 1) < 15,000, 2) 15,000-30,000, 3) 30,001-44,499, 4) 45,000-60,000, and 5) > 60,000. The range bins differ by income type to better match the range of incomes in that income. In levels 1-3, non-respondents are matched to respondents with values in the range bin they indicated. Full record imputation indicates that an individual did not provide sufficient income information and all income recipiency and value variables were imputed.

0 = No allocation
1 = Level 1 statistical match (value with ranges)
2 = Level 2 statistical match (value with ranges)
3 = Level 3 statistical match (value with ranges)
4 = Level 101 statistical match (value without ranges, recipiency '_yn')
5 = Level 102 statistical match (value without ranges, recipiency '_yn')
6 = Level 103 statistical match (value without ranges, recipiency '_yn')
7 = Level 104 statistical match (age, sex)
8 = Level 105 statistical match (all donors can match to all recipients)
9 = FL_665 ≠ 1 (full record impute)

I_INTVAL 2 | 838 (0:15)

Composite allocation flag incorporating information for all interest components

Values: *Composite Value Variable*
A composite value variable is created with multiple value inputs. For example, INT_VAL is the total income value of interest earned from bonds, certificates of deposit (CD), checking accounts, money market accounts, savings accounts, and interest earned on retirement accounts. Imputation for non-response was conducted on the component variables.

Applies to I_INTVAL, I_UCVAL, I_SSVAL, I_SSIVAL, I_VETVAL
